

GINIKA ATUEYI

PRODUCT MANAGEMENT PORTFOLIO

Medical Laboratory Scientist | Product Management

A portfolio highlighting my transition from a quality-focused scientific and healthcare background into digital product management, with a focus on user needs, requirements, product quality and structured problem-solving.

Location	Lagos, Nigeria
Email	atueyiginikachukwumj@gmail.com
Education	B.Sc. Medical Laboratory Science — Nnamdi Azikiwe University
Certification	Product Management — TS Academy

FEATURED PROJECT

Vela AirportRide Africa

Product Management Capstone Project

01 — ABOUT ME

I am a Medical Laboratory Scientist with a strong quality-focused background in histopathology, laboratory diagnostics, documentation and process compliance. My scientific training has strengthened my accuracy, analytical thinking, attention to detail and ability to work with structured procedures.

I expanded these skills through Product Management training at TS Academy, developing practical knowledge of product requirements, user needs, user stories, acceptance criteria, prioritization, usability, accessibility, risks and dependencies.

I am interested in building products that solve real user problems and are clear, usable, reliable and grounded in quality thinking.

CORE SKILLS

Product Requirements	User Needs & User Stories	Acceptance Criteria
Prioritization	User Journey Mapping	Usability & Accessibility
Quality Assurance	Requirements Analysis	Problem Solving
Documentation	Research & Information Synthesis	Stakeholder Communication

02 — FEATURED CASE STUDY

VELA AIRPORTRIDE AFRICA

Airport hailing service • Product Management Capstone

Project overview: Vela AirportRide Africa was designed to address chaotic post-landing transport in African airports by enabling travelers to pre-book reliable rides tied to their flight details.

THE PRODUCT PROBLEM

Travelers arriving at airports need a dependable way to arrange transportation after landing. The product concept connects the ride-booking experience to flight information so that travelers can plan ahead and receive clear pickup guidance.

MY PRODUCT FOCUS

My work focused on understanding the user journey, identifying friction points, documenting product requirements and considering how validation, confirmation, error handling and usability affect trust and adoption.

USER JOURNEY

Successful path: Land in Lagos → Open Vela → Enter flight number → Select destination → View available drivers → Confirm booking and payment → Receive driver details and meeting point → Meet driver → Complete journey → Rate driver.

Failure path: Land in Lagos → Enter invalid/unrecognized flight number → Validation fails → No clear error or fallback → Manual booking attempt → No drivers/payment failure → Frustration → Abandonment and use of informal taxi services.

KEY PRODUCT INSIGHT

The project identified smooth flight validation, clear error handling and strong confirmation UX as important to maintaining trust and preventing users from abandoning the product.

03 — PRODUCT THINKING

REQUIREMENTS & USER EXPERIENCE

The project considered both the core booking experience and the quality conditions needed for a dependable product. Areas covered included functional and non-functional requirements, usability, accessibility, reliability, security, risks and dependencies.

CORE EXPERIENCE

Stage	User need / product consideration
Flight validation	Traveler can enter flight details and receive a meaningful result.
Destination	Traveler can select where they need to go.
Driver selection	Traveler can view available driver information and meeting point.
Payment	Traveler can confirm the booking and pay securely.
Confirmation	Traveler receives driver details, meeting point and booking guidance.
Pickup	Driver meets traveler at the agreed pickup point.
Completion	Traveler completes the trip and can rate the driver.

ERROR STATES & RECOVERY

The failure journey highlighted three important recovery scenarios: invalid flight details, no available drivers and payment failure. The project identified the absence of clear guidance in these situations as a risk to user confidence and retention.

PRODUCT QUALITY CONSIDERATIONS

The project considered usability, accessibility, reliability and security alongside the core functionality. This reflects a product mindset that looks beyond whether a feature works to whether it works clearly and reliably for the intended user.

04 — PRODUCT DELIVERY AWARENESS

TECHNICAL ARCHITECTURE

The project documentation describes a proposed architecture consisting of a React Native mobile frontend, Node.js + Express backend, PostgreSQL database, flight validation and payment services, AWS hosting, and GitHub Actions for CI/CD.

The architecture connects the traveler and driver apps through an API layer and backend services, with separate payment and flight-validation services.

AI-ASSISTED PROJECT ACTIVITIES

The project documentation records AI-assisted work in survey analysis, competitive benchmarking, pitch-deck drafting, UX microcopy for error and confirmation states, and documentation support.

KNOWN LIMITATIONS

The documented limitations included mocked flight validation, limited error-state handling, a Lagos-only demo scope, seeded driver data, an incomplete accessibility audit, and confirmation data not yet cached for offline access.

CERTIFICATION

TS Academy — Product Management

Completed a 3-month Product Management training programme and satisfied the programme requirements. Certificate certified July 10, 2026.

PROFESSIONAL FOUNDATION

My Medical Laboratory Science background contributes strong habits around accuracy, documentation, confidentiality, process compliance and quality control. These transferable skills complement my Product Management training and support a structured approach to product quality.

05 — CONTACT

LET'S BUILD BETTER PRODUCTS

I am open to opportunities where I can combine analytical thinking, quality-focused problem solving and Product Management skills to contribute to useful, user-centered digital products.
